SKILLS

Workflow & operations

- Mapping a workflow end to end
- Replacing spreadsheets & chats with one system
- Order, booking & job tracking
- Scheduling field staff & technicians
- Dashboards, quotas & daily sales
- Roles & access (who sees what)
- Quotations, receipts & plain-language guides

AI-assisted, not AI-dependent

- Building faster with AI (Claude)
- Checking every result before it ships
- Your data stays private — I test with made-up data

Technical

- JavaScript · Python · SQL
- Supabase / PostgreSQL · access rules
- Works offline, syncs phone + PC
- Android app build & release
- Git / GitHub · GitHub Pages

IT & networks

- Office network & Wi-Fi setup
- Remote admin (Omada, GoodCloud)
- pfSense · OpenWrt · VLANs

Content & creative

- Video editing · Photoshop
- Thumbnails & social graphics
- AI voice-over & captions

PROFESSIONAL SUMMARY

I find where a business does the same work twice — in a notebook, a spreadsheet, a group chat — and build the system that stops it. For a Bacolod food distributor, an order app its agents used on every working day of its first week: **86 orders from 82 shops, ₱120,608**, none retyped. For an aircon service shop, a booking and job app **from scope to a released Android app in 3 days**. I build with AI and check every result before it ships.

See it all live at deadeyezjhin.github.io — try both apps as a customer, field staff or office.

HOW I CAN HELP YOUR BUSINESS

- **Turn a spreadsheet or group chat** into one simple app your team uses on phone and PC.
- **Take bookings online:** customers send every detail at once; your office accepts in one tap.
- **Track every order or job** with a clear status — who did what, and when.
- **See your sales:** each staff member's day, week and monthly target, counted for you.
- **Keep your office online**, and **handle your visuals:** thumbnails, graphics, video.

RESULTS — SYSTEMS BUILT FOR REAL BUSINESSES

SukiRun — order & sales system for a distributor's field team

Android app + office PC, one shared list — in use since September 2026

₱120,608

ordered, first 6 working days

86

orders from 82 shops

705

order lines, none retyped

6 / 6

working days with orders

- **Before:** orders written in a notebook, added up on a calculator, retyped into Messenger. **After:** added up on the phone in front of the shopkeeper, reaching the office already typed.
- **Gave the office what the spreadsheets could not:** a live dashboard, each agent's day and week against a monthly quota, a full order trail, and a 214-product catalogue with photos.
- **Works with no signal;** each role — agent, office, warehouse, delivery — sees only its own work.

Winter Services — booking & job app for an aircon service shop

Web booking page for customers + Android app for the office and technicians — September 2026

3 days

scope to released Android app

19

releases, plain-word notes

3

roles, one shared status

₱0

monthly running cost

- **Before:** every booking a call or Facebook message to the owner's personal number; the schedule in his head. **After:** customers book online with address, landmark, map pin and each aircon's services; the office accepts in one tap and the job lands on the day asked.
- **Office, technicians and customers see one status** — booked, scheduled, on the way, done — with who and when. Customer data is locked away from the public page.
- **The owner runs it himself:** prices, services, closed days, PDF quotations, a check-up call list.

Live demo + presentation: deadeyezjhin.github.io

IT SUPPORT — NETWORKS RUN REMOTELY

- **Site 1 — 171 connected devices:** pfSense router, managed switch, 5 separate networks (VLANs), access points over a wireless bridge.
- **Site 2 — 4,549 connections at once** on one GL.iNet OpenWrt router (routing, VLANs, traffic shaping) at only 0.27 load.

EXPERIENCE

January 2021 – Present

Content Creator & Tool Builder

YouTube (@DeadEyeZJhinBRUH) — Bacolod City, Negros Occidental

- Grew the channel to **15,000+ subscribers**; I plan, edit and design every upload and thumbnail.
- Built two free creator tools on Hugging Face — **Kokoro SRT Studio** (AI voice-over with word-by-word captions) and a **66-layout Thumbnail Maker** — and 9 scripted Roblox game systems — all on the portfolio.

EDUCATION

Bachelor of Science in Marine Transportation

VMA Global College — Bacolod City, Negros Occidental
